# H130 BUBBLE WINDOW

**The Air Zermatt Bubble Window for the Airbus Helicopter H130 B4 / T2 is designed to maximise the viewing capability during vertical reference operations.**

Due to its unique shape it provides the pilot with a distortion free vertical view and a direct view onto the tail rotor. Therefore, the Air Zermatt Bubble Window significantly improves the operational safety for aerial work. It is easy to install and requires no structural modification of the pilot door. To maximise the versatility of your rotorcraft, the Air Zermatt Bubble Window is EASA certified (EASA STC 10070292) for compatibility with Dual Mirror installation and Heli-Utility-Basket™ installations.

## **Key features**

- EASA approved for H130 B4 / T2 (EASA STC 10070292)
- Designed to maximize view
- Improved safety
- Easy to install
- No structural modifications required
- Approved compatibility with Dual Mirror and Heli-Utility-Basket™
